SPC INDUSTRIAL™

PRODUCT GUIDE: Chemical Containment

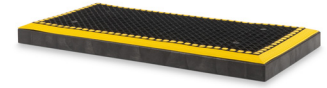

Choose Products that Support your Chemical Containment Strategy

If you work with chemicals in your facility, then you understand the importance of reliable storage and material handling processes. By improving your systems, you're improving the health and safety of your employees.

SPC Industrial manufactures non-corrosive and chemically resistant products to help you reach your full potential. Incorporate products that you can trust, and ensure the safety of your employees.

Add-A-Level™

Our modular, stackable work platforms create the perfect working height for your operations. Add-A-Level can increase productivity by giving your employees a lift, and keep them away from harmful chemicals on working walkways.

DuraShelf®

DuraShelf is made of the toughest all-plastic high-density polyethylene material. These systems are chemically resistant and non-corrosive, making them ideal solutions for HAZMAT storage.

Dunnage-Rack™

Lift chemical containers off the ground with Dunnage-Rack. Made of the same all-plastic material as DuraShelf, Dunnage-Rack provides stability and durability for bulk storage, and accommodates stackable containers, large and small.

ADD-A-LEVEL Decontamination

Incorporate Add-A-Level in your decontamination station strategy, which provides a chemically resistant work platform to give employees a lift and avoid harmful chemicals.

DURASHELF STORAGE SYSTEM Storage & Organization

Chemical storage just got easier with DuraShelf systems and its corresponding Containment Trays to keep chemical containers off the ground and organized with OSHA certified color coding.

DUNNAGE-RACK Safety Compliance

Lockers are recommended by OSHA to use in clean areas of a decontamination site to keep personal items safe. Installing Dunnage-Rack to keep lockers off the ground makes it possible to clean floor surfaces without chance of contaminating lockers.
